Individual Status Report 1

Previous Week's Goals

N/A

Previous Week's Progress

On an individual level, I have installed the checker framework on eclipse, used the nullable checker on a small piece of my own code, and attempted to create a trivial checker (to no avail, although it was insightful). I have worked closely with the rest of the team to hammer out a plan for the project, the high-level approach to the logic behind the type checker, and the client interactions our final product should have.

This Week's Goals

This week, the group's goal as listed in our plan is to figure out the use cases, user manual, and case studies. I interpret this as figuring out the mold that we will build our program to fit. My personal goals are to ensure the user manual is written well, make sure the case studies cover a wide range of code, and to begin getting out a good test suite. I want to start writing tests even though they are not planned for a while because I believe they go well with figuring out our specifications
